🎓 EDUCATION

Higher Secondary Education (12th Grade)
Fatima Convent public school
Year of completion : 2023

Bachelor of Computer Application (BCA)
SGPA - 7.64
2024 - Present

📂 PROJECTS

1. CALCULATOR PROJECT (Python)
The Calculator Project is a command-line application developed using Python that performs basic arithmetic operations such as addition, subtraction, multiplication, and division. The project emphasizes clean logic implementation, user input handling, and error prevention for invalid operations, showcasing a solid understanding of Python fundamentals and practical programming concepts.
https://github.com/HeetBhatt18/Python-Projects 🔗

2. Data Analysis Using Pandas (Python | VS Code)
This project showcases practical experience in data analysis using the Pandas library in Python, developed and executed within Visual Studio Code. The work involves loading datasets, cleaning and preprocessing data, performing exploratory data analysis, and applying operations such as filtering, grouping, aggregation, and handling missing values. It reflects a strong understanding of data manipulation concepts and real-world data handling using Python. https://github.com/HeetBhatt18/PANDAS 🔗

🧠 SKILLS

- **Programming:** Python, C
- **Data Handling:** Pandas
- **CS Fundamentals:** DBMS Basics
